## M/J GRADE 8 PRE-ALGEBRA

### Unit 1: Real Numbers, Exponents & Scientific Notation

#### 2015 - 2016

Standards		Topic & Suggested Pacing	Student Target	Core
<b>Mathematics Florida Standards</b>				Go Math Lessons
MAFS.8.EE.1.1 Calculators: <b>NO</b>	Know and apply the properties of integer exponents to generate equivalent numerical expressions. For example, $3^{-3} = 1/3^3 = 1/27$ <b>2.1</b>	<b>August 20 - September 9</b>  Rational and Irrational Numbers  Sets of Real Numbers  Ordering Real Numbers  Integer Exponents  Scientific Notation with Positive Powers of 10  Scientific Notation with Negative Powers of 10  Operations with Scientific Notation	<ul style="list-style-type: none"> <li>• Rewrite rational numbers and decimals, take square roots and cube roots, and approximate irrational numbers</li> <li>• Describe relationships between sets of real numbers</li> <li>• Order a set of real numbers</li> <li>• Develop and use the properties of integer exponents</li> <li>• Use scientific notation to express very large quantities</li> <li>• Use scientific notation to express very small quantities</li> <li>• Add, subtract, multiply and divide using scientific notation</li> </ul>	1.1
MAFS.8.EE.1.2 Calculators: Neutral	Use square root and cube root symbols to represent solutions to equations of the form $x^2 = p$ and $x^3 = p$ , where p is a positive rational number. Evaluate square roots of small perfect squares and cube roots of small perfect cubes. Know that $\sqrt{2}$ is irrational. <b>1.1</b>			1.2
MAFS.8.EE.1.3 Calculators: <b>NO</b>	Use numbers expressed in the form of a single digit times an integer power of 10 to estimate very large or very small quantities, and to express how many times as much one is than the other. For example, estimate the population of the United States as $3 \times 10^8$ and the population of the world as $7 \times 10^9$ , and determine that the world population is more than 20 times larger. <b>2.2, 2.3</b>			1.3
MAFS.8.EE.1.4 Calculators: <b>NO</b>	Perform operations with numbers expressed in scientific notation, including problems where both decimal and scientific notation are used. Use scientific notation and choose units of appropriate size for measurements of very large or very small quantities (e.g., use millimeters per year for seafloor spreading). Interpret scientific notation that has been generated by technology. <b>2.4</b>			2.1
MAFS.8.EE.1.4 Calculators: <b>NO</b>	Perform operations with numbers expressed in scientific notation, including problems where both decimal and scientific notation are used. Use scientific notation and choose units of appropriate size for measurements of very large or very small quantities (e.g., use millimeters per year for seafloor spreading). Interpret scientific notation that has been generated by technology. <b>2.4</b>			2.2
MAFS.8.EE.1.4 Calculators: <b>NO</b>	Perform operations with numbers expressed in scientific notation, including problems where both decimal and scientific notation are used. Use scientific notation and choose units of appropriate size for measurements of very large or very small quantities (e.g., use millimeters per year for seafloor spreading). Interpret scientific notation that has been generated by technology. <b>2.4</b>			2.3
MAFS.8.EE.1.4 Calculators: <b>NO</b>	Perform operations with numbers expressed in scientific notation, including problems where both decimal and scientific notation are used. Use scientific notation and choose units of appropriate size for measurements of very large or very small quantities (e.g., use millimeters per year for seafloor spreading). Interpret scientific notation that has been generated by technology. <b>2.4</b>			2.4
MAFS.8.NS.1.1 Calculators: <b>NO</b>	Know that numbers that are not rational are called irrational. Understand informally that every number has a decimal expansion; for rational numbers show that the decimal expansion repeats eventually, and convert a decimal expansion which repeats eventually into a rational number. <b>1.1, 1.2</b>		EE - Expressions and Equations NS - The Number System	
MAFS.8.NS.1.2 Calculators: <b>NO</b>	Use rational approximations of irrational numbers to compare the size of irrational numbers, locate them approximately on a number line diagram, and estimate the value of expressions (e.g., $\pi^2$ ). For example, by truncating the decimal expansion of $\sqrt{2}$ , show that $\sqrt{2}$ is between 1 and 2, then between 1.4 and 1.5, and explain how to continue on to get better approximations. <b>1.1, 1.3</b>			

**FSQ Unit 1**

# The School District of Palm Beach County

## M/J GRADE 8 PRE-ALGEBRA

### Unit 2A: Proportional and Non-Proportional Relationships

### 2015-2016

Standards		Topic & Suggested Pacing	Student Target	Core
<b>Mathematics Florida Standards</b>				Go Math Lessons
MAFS.8.EE.2.5 Calculators: <b>Yes</b>	Graph proportional relationships, interpreting the unit rate as the slope of the graph. Compare two different proportional relationships represented in different ways. For example, compare a distance-time graph to a distance-time equation to determine which of two moving objects has greater speed. <b>3.3</b>	<b>September 10 - October 7</b>  Representing Proportional Relationships	<ul style="list-style-type: none"> <li>• Use tables, graphs and equations to represent proportional situations</li> </ul>	<b>3.1</b>
MAFS.8.EE.2.6 Calculators: <b>Yes</b>	Use similar triangles to explain why the slope $m$ is the same between any two distinct points on a non-vertical line in the coordinate plane; derive the equation $y = mx$ for a line through the origin and the equation $y = mx + b$ for a line intercepting the vertical axis at $b$ . <b>3.1, 4.2</b>	Rate of Change and Slope	<ul style="list-style-type: none"> <li>• Find a rate of change or a slope</li> </ul>	<b>3.2</b>
MAFS.8.F.1.2 Calculators: <b>Yes</b>	Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). For example, given a linear function represented by a table of values and a linear function represented by an algebraic expression, determine which function has the greater rate of change. <b>3.3, 4.4</b>	Interpreting the Unit Rate as Slope	<ul style="list-style-type: none"> <li>• Interpret the unit rate as slope</li> </ul>	<b>3.3</b>
MAFS.8.F.1.3 Calculators: <b>Yes</b>	Interpret the equation $y = mx + b$ as defining a linear function, whose graph is a straight line; give examples of functions that are not linear. For example, the function $A = s^2$ giving the area of a square as a function of its side length is not linear because its graph contains the points (1,1), (2,4) and (3,9), which are not on a straight line. <b>4.1, 4.3, 4.4</b>	Representing Linear Non-Proportional Relationships	<ul style="list-style-type: none"> <li>• Use tables, graphs and equations to represent linear, non-proportional situations</li> </ul>	<b>4.1</b>
MAFS.8.F.2.4 Calculators: <b>Neutral</b>	Construct a function to model a linear relationship between two quantities. Determine the rate of change and initial value of the function from a description of a relationship or from two $(x, y)$ values, including reading these from a table or from a graph. Interpret the rate of change and initial value of a linear function in terms of the situation it models, and in terms of its graph or a table of values. <b>3.2, 3.3, 4.2, 4.3, 4.4</b>	Determining Slope & y-Intercept	<ul style="list-style-type: none"> <li>• Determine the slope and the y-intercept of a line</li> </ul>	<b>4.2</b>
		Graphing Linear Non-Proportional Relationships Using Slope and y-Intercept	<ul style="list-style-type: none"> <li>• Graph a line using the slope and the y-intercept</li> </ul>	<b>4.3</b>
		Proportional & Non-Proportional Situations	<ul style="list-style-type: none"> <li>• Distinguish between proportional and non-proportional situations</li> </ul>	<b>4.4</b>

## M/J GRADE 8 PRE-ALGEBRA

### Unit 2B: Functions

### 2015-2016

Standards		Topic & Suggested Pacing	Student Target	Core
<b>Mathematics Florida Standards</b>		<b>October 13 - November 6</b>		Go Math Lessons
MAFS.8.EE.2.5 Calculators: <b>Yes</b>	Graph proportional relationships, interpreting the unit rate as the slope of the graph. Compare two different proportional relationships represented in different ways. For example, compare a distance-time graph to a distance-time equation to determine which of two moving objects has greater speed. <b>6.3</b>	Writing Linear Equations from Situations & Graphs	<ul style="list-style-type: none"> <li>• Write an equation to model a linear relationship given a graph or a description</li> <li>• Write an equation to model a linear relationship given a table</li> <li>• Contrast linear and nonlinear sets of bivariate data</li> <li>• Identify and represent functions</li> <li>• Describe functions</li> <li>• Use tables, graphs and equations to compare functions</li> <li>• Describe a relationship given a graph, and sketch a graph given a description</li> </ul> <div style="border: 1px solid black; background-color: #e0e0e0; padding: 5px; margin-top: 10px;">                     EE - Expressions and Equations                      F - Functions                      SP - Statistics and Probability                 </div>	<b>5.1</b>
MAFS.8.F.1.1 Calculators: Neutral	Understand that a function is a rule that assigns to each input exactly one output. The graph of a function is the set of ordered pairs consisting of an input and the corresponding output. <b>6.1, 6.2</b>	Writing Linear Equations from a Table		<b>5.2</b>
MAFS.8.F.1.2 Calculators: <b>Yes</b>	Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). For example, given a linear function represented by a table of values and a linear function represented by an algebraic expression, determine which function has the greater rate of change. <b>6.3</b>	Linear Relationships and Bivariate Data		<b>5.3</b>
MAFS.8.F.1.3 Calculators: <b>Yes</b>	Interpret the equation $y = mx + b$ as defining a linear function, whose graph is a straight line; give examples of functions that are not linear. For example, the function $A = s^2$ giving the area of a square as a function of its side length is not linear because its graph contains the points (1,1), (2,4) and (3,9), which are not on a straight line. <b>6.2</b>	Identifying and Representing Functions		<b>6.1</b>
MAFS.8.F.2.4 Calculators: Neutral	Construct a function to model a linear relationship between two quantities. Determine the rate of change and initial value of the function from a description of a relationship or from two (x, y) values, including reading these from a table or from a graph. Interpret the rate of change and initial value of a linear function in terms of the situation it models, and in terms of its graph or a table of values. <b>5.1, 5.2, 6.3</b>	Describing Functions		<b>6.2</b>
MAFS.8.F.2.5 Calculators: Neutral	Describe qualitatively the functional relationship between two quantities by analyzing a graph (e.g., where the function is increasing or decreasing, linear or nonlinear). Sketch a graph that exhibits the qualitative features of a function that has been described verbally. <b>6.4</b>	Comparing Functions		<b>6.3</b>
MAFS.8.SP.1.2 Calculators: Neutral	Know that straight lines are widely used to model relationships between two quantitative variables. For scatter plots that suggest a linear association, informally fit a straight line, and informally assess the model fit by judging the closeness of the data points to the line. <b>5.3</b>	Analyzing Graphs		<b>6.4</b>
MAFS.8.SP.1.3 Calculators: Neutral	Use the equation of a linear model to solve problems in the context of bivariate measurement data, interpreting the slope and intercept. For example, in a linear model for a biology experiment, interpret a slope of 1.5 cm/hr as meaning that an additional hour of sunlight each day is associated with an additional 1.5 cm in mature plant height. <b>5.3</b>			

FSQ Unit 2B

**The School District of Palm Beach County**  
**M/J GRADE 8 PRE-ALGEBRA**  
**Unit 3: Solving Equations and Systems**  
**2015-2016**

Standards		Topic & Suggested Pacing	Student Target	Core
<b>Mathematics Florida Standards</b>				Go Math Lessons
MAFS.8.EE.3.7 Calculators: <b>Yes</b>	Solve linear equations in one variable. a. Give examples of linear equations in one variable with one solution, infinitely many solutions, or no solutions. Show which of these possibilities is the case by successively transforming the given equation into simpler forms, until an equivalent equation of the form $x = a$ , $a = a$ , or $a = b$ results (where $a$ and $b$ are different numbers). b. Solve linear equations with rational number coefficients, including equations whose solutions require expanding expressions using the distributive property and collecting like terms. <b>7.1, 7.2, 7.3, 7.4</b>	<b>November 9 - December 15</b>  Equations with the Variable on Both Sides  Equations with Rational Numbers  Equations with the Distributive Property	<ul style="list-style-type: none"> <li>• Represent and solve equations with the variable on both sides</li> <li>• Solve equations with rational number coefficients and constants</li> <li>• Use the Distributive Property to solve equations</li> <li>• Give examples of equations with a given number of solutions</li> </ul>	<b>7.1</b> <b>7.2</b> <b>7.3</b> <b>7.4</b>
	MAFS.8.EE.3.8 Calculators: <b>Yes</b>	Analyze and solve pairs of simultaneous linear equations. a. Understand that solutions to a system of two linear equations in two variables correspond to points of intersection of their graphs, because points of intersection satisfy both equations simultaneously. b. Solve systems of two linear equations in two variables algebraically, and estimate solutions by graphing the equations. Solve simple cases by inspection. For example, $3x + 2y = 5$ and $3x + 2y = 6$ have no solution because $3x + 2y$ cannot simultaneously be 5 and 6. c. Solve real-world and mathematical problems leading to two linear equations in two variables. For example, given coordinates for two pairs of points, determine whether the line through the first pair of points intersects the line through the second pair. <b>8.1, 8.2, 8.3, 8.4, 8.5</b>	Equations with Many Solutions or No Solutions  Solving Systems of Linear Equations by Graphing  Solving Systems by Substitution  Solving Systems by Elimination  Solving Systems by Elimination w/ Multiplication  Solving Special Systems	<ul style="list-style-type: none"> <li>• Solve a system of equations by graphing</li> <li>• Use substitution to solve a system of linear equations</li> <li>• Solve a system of linear equations by adding or subtracting</li> <li>• Solve a system of linear equations by multiplying</li> <li>• Solve a system with no solutions or infinitely many solutions</li> </ul>

MAFS.8.EE.2.6 Calculators: <b>Yes</b>	Use similar triangles to explain why the slope $m$ is the same between any two distinct points on a non-vertical line in the coordinate plane; derive the equation $y = mx$ for a line through the origin and the equation $y = mx + b$ for a line intercepting the vertical axis at $b$ . <b>11.3 *Not included on district assessment for this unit. Standard will be assessed elsewhere as appropriate.</b>	<b>February 3 - March 8</b>  Parallel Lines Cut by a Transversal	<ul style="list-style-type: none"> <li>• Understand the relationship of angles formed by parallel lines that are cut by a transversal</li> <li>• Understand the relationship of the measures of the the angles of a triangle</li> </ul>	<b>11.1</b> <b>11.2</b> <b>11.3</b>
MAFS.8.G.1.5 Calculators: Neutral	Use informal arguments to establish facts about the angle sum and exterior angle of triangles, about the angles created when parallel lines are cut by a transversal, and the angle-angle criterion for similarity of triangles. For example, arrange three copies of the same triangle so that the sum of the three angles appears to form a line, and give an argument in terms of transversals why this is so. <b>11.1, 11.2, 11.3 *Not included on district assessment for this unit. Standard will be assessed elsewhere as appropriate.</b>	Angles Theorems for Triangles  Angle-Angle Similarity	<ul style="list-style-type: none"> <li>• Determine when two triangles are similar</li> <li>• Prove the Pythagorean Theorem and use it to solve problems</li> <li>• Test the converse of the Pythagorean Theorem and use it to solve problems</li> </ul>	<b>12.1</b> <b>12.2</b> <b>12.3</b>
MAFS.8.G.2.6 Calculators: <b>Yes</b>	Explain a proof of the Pythagorean Theorem and its converse. <b>12.1, 12.2</b>	The Pythagorean Theorem  Converse of Pythagorean Theorem	<ul style="list-style-type: none"> <li>• Use the Pythagorean Theorem to find the distance between two points on a coordinate plane</li> </ul>	<b>13.1</b> <b>13.2</b> <b>13.3</b>
MAFS.8.G.2.7 Calculators: <b>Yes</b>	Apply the Pythagorean Theorem to determine unknown side lengths in right triangles in real-world and mathematical problems in two and three dimensions. <b>12.1</b>	Distance Between Two Points	<ul style="list-style-type: none"> <li>• Find the volume of a cylinder</li> <li>• Find the volume of a cone</li> <li>• Find the volume of a sphere</li> </ul>	
MAFS.8.G.2.8 Calculators: <b>Yes</b>	Apply the Pythagorean Theorem to find the distance between two points in a coordinate system. <b>12.3</b>	Volume of Cylinders		
MAFS.8.G.3.9 Calculators: <b>Yes</b>	Know the formulas for the volumes of cones, cylinders, and spheres and use them to solve real-world and mathematical problems. <b>13.1, 13.2, 13.3</b>	Volume of Cones  Volume of Spheres

### Unit 6: Statistics

### 2015-2016

Standards		Topic & Suggested Pacing	Student Target	Core
<b>Mathematics Florida Standards</b>		<b>March 11 - April 4</b>		Go Math Lessons
MAFS.8.SP.1.1 Calculators: Neutral	Construct and interpret scatter plots for bivariate measurement data to investigate patterns of association between two quantities. Describe patterns such as clustering, outliers, positive or negative association, linear association, and nonlinear association. <b>14.1, 14.2</b>	Scatter Plots & Association	<ul style="list-style-type: none"> <li>• Construct and interpret scatter plots</li> <li>• Use a trend line to make a prediction from a scatter plot</li> <li>• Construct and interpret two-way frequency tables</li> <li>• Organize and analyze categorical data</li> </ul> <div style="border: 1px solid black; background-color: #d9e1f2; padding: 5px; margin-top: 10px; text-align: center;">SP - Statistics and Probability</div>	<b>14.1</b>
MAFS.8.SP.1.2 Calculators: Neutral	Know that straight lines are widely used to model relationships between two quantitative variables. For scatter plots that suggest a linear association, informally fit a straight line, and informally assess the model fit by judging the closeness of the data points to the line. <b>14.1, 14.2</b>	Trend Lines & Predictions		<b>14.2</b>
MAFS.8.SP.1.3 Calculators: Neutral	Use the equation of a linear model to solve problems in the context of bivariate measurement data, interpreting the slope and intercept. For example, in a linear model for a biology experiment, interpret a slope of 1.5 cm/hr as meaning that an additional hour of sunlight each day is associated with an additional 1.5 cm in mature plant height. <b>14.2</b>	Two-Way Frequency Tables		<b>15.1</b>
MAFS.8.SP.1.4 Calculators: Yes	Understand that patterns of association can also be seen in bivariate categorical data by displaying frequencies and relative frequencies in a two-way table. Construct and interpret a two-way table summarizing data on two categorical variables collected from the same subjects. Use relative frequencies calculated for rows or columns to describe possible association between the two variables. For example, collect data from students in your class on whether or not they have a curfew on school nights and whether or not they have assigned chores at home. Is there evidence that those who have a curfew also tend to have chores? <b>15.1, 15.2</b>	Two-Way Relative Frequency Tables		<b>15.2</b>
